Standardized but flexible

Modular Tray Systems in ISO and DIN
Reliable functionality through the realization of efficiency potentials will in future become even more important than it is today in hospitals and nursing homes. This means that it will also become increasingly important to optimize storage and logistics systems. The H+H SYSTEM can make a valuable contribution to meeting these demands. With our MODULAR TRAY SYSTEM in ISO and DIN formats for use in cupboards and trolleys, space savings may be achieved in storage and logistical processes may be simplified.

As the optimum supplement, we recommend the tried-and-tested H+H sliding dividers for storing drugs and small parts.

### Various modular tray heights
- DIN and ISO standard modular trays in various heights.

### Partitions adapted to the stored items
- Optimum use of space with cross-recess dividers (adjustable by 10 and 20 mm) with flexible sliding dividers.

### Enhanced stability with “ClipOn”-effect, with the H+H FlexModul® open
- The ClipOn-effect creates a secure connection between the dividers and the modules that may be disengaged at any time. This also guarantees absolute stability.

### Card holders (from mini to cheque-card sizes)
- Card holders are available as integrated or ClipOn versions. Cards are used for locating and ordering items (double-card system).

### Modular tray stoppers
- Prevents the modular trays from falling out when they are drawn out.

---

**The modular tray system for greater efficiency**

30% space saving through flexible dividing
Solutions from the innovation leader

**H+H SYSTEM** has been concerned with intelligent solutions for storing all kinds of drugs, bandage materials, storage accessories, and small components in a space-saving and clear manner for more than three decades.

The consistent development of all systems has generated experience and know-how that naturally may also be found in the new modular system.

- Simple and rapid repositioning of all dividers
- Quick response to changing space requirements
- High stability through ClipOn-effect
- Optimization of available space through the combination of flexible sliding dividers and cross-recess dividers.

**Space savings**

1. Without dividers
2. Fixed dividers (cross-recess)
3. Flexible dividers (cross-recess and sliding dividers)

**ONE MODULAR TRAY – many possibilities**

1. Fixed partitions with cross-recess dividers
2. Cross-recess dividers with flexible dividers
3. Variable partitions with flexible dividers

**Why a modular tray system?**

The great benefit of this modular tray concept lies in the fact that it may be used both as a storage and logistics system. The modular trays may be freely combined with each other and thus may be used in “Exchange Tray Systems”. Other advantages include easy cleaning and sterilization and easy modular tray partitioning and labelling. Modular tray systems may also be simply and quickly transported to different places of use.

**Universal application**

**H+H SYSTEM’s** modular tray system may be used universally. Everywhere where optimized space usage and tidiness is required in cabinets and shelving. In other words, in hospitals, nursing homes, doctors’ practices, and pharmacies where the system may also of course be used in transport.

**The difference between ISO and DIN**

The difference between the two industrial standards lies in the sizes. DIN demands cabinet sizes of 600 x 600 mm, ISO requires 660 x 460 mm. The module sizes have been adapted accordingly: 538 x 500 mm for DIN, 600 x 400 mm for ISO.

**Either transparent or grey**

**H+H SYSTEM** provides two concrete answers to the material question. Either the visually pleasing PC transparent, which is also extremely durable and quick to sterilize. Or the low-cost and easy-to-wash ABS grey.

**What can be stored?**

Basically anything that fits can be stored in a module. The **H+H FlexModul** is particularly suitable for tidily storing drugs, bandage materials, and supplies, hygiene articles, laundry, and liquids (e.g. infusion bottles).
H+H SYSTEM | ISO FlexModul®

**H+H FlexModul®**

the ISO-format
ISO standard but flexible

The H+H FlexModul® is the product of choice where highest demands are placed on flexibility, efficiency and quality. This module is the result of intensive development work aimed at achieving maximum variability in storage. With the open and closed FlexModul H+H SYSTEM has achieved this objective perfectly. The effect: low weight, optimum overview and leak-proof bases. When used in combination with the sliding dividers, the greatest possible space savings and highest efficiencies are achieved.

With the **H+H FlexModul® open** the marketed cross-recess dividers may be secured to the modules using the ClipOn-effect. They may be secured so firmly that the partitions will withstand highest lateral loads without them being forced out of their positions.

With the **H+H FlexModul® closed** the advantage is obvious. The module is leak-proof, easy to clean, thus ensuring optimum hygiene.

**Advantages**
- Smooth walls for greater hygiene
- Fixed tray and divider positioning
- Partitions may be adapted to storage articles
- Bay width may be adjusted every 10 mm and 20 mm
- Additional lettering or company logo possible
- Low weight
- Stackable
- Single-part stop system

**H+H SYSTEM’s** Klinotec brand stands for modular flexibility. This high-quality module delivers absolute tidy storage in cabinets sized 600 x 600 mm (external dimensions) and simplifies supply material logistics in a very decisive way.

The fact that Klinotec modules have been on the market for more than 20 years proves their functional superiority in hospitals, practices and nursing homes. In conjunction with H+H sliding dividers they create perfect sorting systems that save time and decisively reduce the possibility of mistakes.

### Advantages
- Partitions may be adapted to storage articles
- Moulded-on drawer stops
- Leak proof
- Low weight
- ABS plastic, scratchproof and shockproof
- Temperature-resistant from -40 °C to +70 °C
- Several dividing versions

- **HEIGHTS**
  - 50 mm
  - 100 mm
  - 180 mm

- **MATERIALS**
  - ABS grey
  - Acrylic transparent
  - Wire basket, coated

- **DIVISIONS**
  - Fixed partition with cross-recess dividers
  - Variable partition with flexible dividers
  - Removable partition dividers may be removed quickly for easier cleaning
Choose between two robust supporting systems!
Side panels or heavy-duty telescopic runners for ISO modular trays

Choose between two robust supporting systems!
Side panels or heavy-duty telescopic runners for ISO modular trays

Side panels
The modular trays are simply attached to side panels. The small distance between ribs results in high tray densities.

Telescopic runners
Telescopic runners possess a bearing capacity of up to 50 kg. The modular trays remain easy to move with no extraction losses.

Additionals for even greater efficiency
All additionals are available in different versions. We will be happy to assist!

1. FlexModul dividers
2. Sliding dividers
3. Seals
4. Drawer stops
5. Storage trays
6. Storage Boxes
7. Card holders
8. Label bars
9. Labelling
10. Bracing
11. Shelves

There are many options to equip your telescopic runners.

- Catheter-Extraction with hooks
- Frame for Catheter-Basket
- Frame for Hanging File Folders
- Telescopic Workplate
- Tube Holder

New Side Panels 2 in 1 straight and hinged
